❄️ NoHow Inc provides sales and services for Remote Environmental Monitoring Systems. We have provided customers with site analysis, products and installation of remote monitoring sites for over 10 years. As a system integrator for datalogger and sensor manufacturers, we install remote systems for monitoring weather parameters, fire weather conditions, water quality, air quality and equipment control. We specialize with installations in remote and rugged Alpine terrain. We currently have customers located from Alaska to Argentina. NoHow inc also is the sole source for “Strov” Weather and Avalanche software. Strov is a relational database software that manages the data from remote weather sites, avalanche occurrences, terrain, fire missions, explosives use and explosives inventory.

RECCO is advance rescue technology utilized by more that 600 rescue organizations worldwide to assist in searching avalanche debris for people that may be buried. The system consists of two parts. A passive reflector that is integrated in hard goods and outerwear by more than 150 brands and the detector, that is used as a primary response tool by organized rescue groups responding to rescue. RECCO is not a companion rescue tool and is only used by organized rescue groups. RECCO North America has been supporting rescue groups with the replacement, training and technical support for RECCO North America since 1997.
